

Expanding on Level 5, Sex
By Dennis Stephens
May 6, 1993
Transcribed by Pete McLaughlin
July 8, 2012

Hello Greg, this is Dennis here and today is Thursday the 6th of May 1993 and ahh...although I'm cutting this tape on this date I won't send it to you until you get back from the USA because you've got... you've got enough on your plate at the moment. So I'll delay sending it to you until I'm sure your back.

Now this tape is the fourth and I assure you the final tape of background material for level 5 of my technology. It's ahh... it's the fourth and final and it's in addition to the... the one on the background material, which is my reply on the subject of umm... Unstacking and it was also in addition to the ... the one I sent you on the subject of Dissociation and it's in addition to the recent one I sent you in... which covers the subject of Exclusion Postulates and so forth The recent one, which was just... just a few weeks ago.

01:05

So there's a total of four in all, Greg, that ahh... in addition to the ahh... to the level 5 material. Whether you issue them as a separate umm... whether you issue them as separate to the ahh... to the original write-up or whether you ahh... somehow add it as an addendum to the original write-up is entirely up to you. Uhh... I don't mind actually either way. It's background material, that's all. It's simply expansion, background material. The level 5 as it stands, as I've given it to you umm... is sufficient. All there...it's all there. That uhh... these four tapes would help a person in doing... doing level 5. Levels 1 to 4 are quite ok, they don't need any expansion, but level 5, this background material, would help. These four tapes would help a person doing the background material on level 5. So I leave it entirely up to you whether you... the way in which you issue it.

I suppose if pushed my... my... my preference would be that it would be issued as a separate ahh... a separate material, as just background... background material to level 5 of the ... of the technology.

02:22

Ionization Test

Now there's two... there's two things I want to take up on this tape. First is the subject of ionization, ionization.

02:30

Now almost everyone who's done any high school physics is familiar with this subject of ionization and anyone whose switched on a ... switched on a strip bulb is also familiar with a practical application... application of this subject of ionization. Ahh... just briefly in this universe... in the physical universe, I umm... a gas, if you pass a positive electric charge through... through a gas umm... the gas tends to ionize, the molecules are ionized positively and some, I don't know which ones, but some of these elements when so ionized, will glow. And umm... neon, for example, the inert gasses, neon glows a yellow orange color, some glow green, some glow white in color, some a ruddy color. And it is the basis of strip lighting.

03:25

They simply umm... to make a strip light they simply evacuate the air out of the bulb, put in an inert gas, which they know will ionize and ahh... they coat the inside of the tube with something which is sensitive to the ahh... will amplify the ionization effect. And the... the ... the over effect is that they get ahh... they get a 40 watt strip... strip bulb, strip lighting, this ahh... the principle is ionization.

03:45

Anyway that's the principle in electricity in the physical universe of ionization.

03:57

Now I'm using the word to umm... to explain a principle that will show up at level 5 and will puz... will puzzle a person unless they know what's going... going on. The... the subject of ionization occurs when a person, usually on... in the grades of OT, starts to put postulates into mass in the universe. Whether there... the... the... he's putting postulates in the of the universe... physical universe in present time or whether he's putting postulates into the mass of the universe in the past or whether he's putting it in... even in the mass of his pictures, doesn't make any difference. When he starts putting postulates into mass this phenomena of ionization will occur and it's a useful one to be familiar with.

04:40

Now this is... this is the way it works. That soon as you... soon as you put... put any postulate into... into a mass... into any mass ahh... you... you... your going to trigger this subject of ionization.

04:53

Now the rules of ionization, as far as postulates are concerned, are very, very straightforward and very, very simple. And I'll give them to you so you'll know... know what to expect when the phenomena shows up.

05:02

First of all let's consider any erasable goals package, let's take the "to know" goals package the basic goals package. "to know" but it is applicable to any erasable goals package. The positive... the two... at this... ahh... all erasable goals packages have two positive legs and say... to... example "to know" goals package the two positive legs are "to know" and "to be known". Now if you put those postulates... either one of those two postulates into mass the mass will ionize either white or colored. The ... the usual ionization color is white or it may be a creamy color or yellowy color. The mass will actually go white or go yellow or creamy or it may go colored, any color of the rainbow but that's very uncommon. The most common effect is white or creamy. The two positive legs and the two negative legs of the "to know" goals package, that's "to not know" and "to not be known" the... the mass will go black, will ionize black.

06:05

Now that is true for the "to know" goals package and it is true for any erasable goals package, it's true for any erasable goals package. So immediately ionization gives us another test for an erasable goals package... to test ahh... to take a goal...

The Old Test of Erasability

We already have an old test for an erasable goals package is... is the to know... is the "to blank" leg of the goal opposed to the "to be know" leg of the basic package. If the ... if the "to blank" leg of the goal being tested... positive "to blank" leg is... is opposed to the "be know" leg of the basic "to know" goals package then the ... the goal is un-erasable.

06:56

Example: the goal "to destroy", well the goal "to destroy" is obviously opposed to the goal "to be known" if somebody's trying "to be known" well and somebody comes along and tries to destroy them, their obviously opposed to ... to their postulate "to be known" so the goal "to destroy" cannot be formulated into an erasable goals package.

07:13

That's our... that's our old and a reasonable test, and it's a very valid test. It's a test that everyone... you should always undertake. You should always under take that test. But I'll give you the full list of the tests for... for... for an erasable... unerasable goals package

07:30

So we can add to that one, we can add now the subject of ionization umm... we simply ahh... we simply put the ahh... two positive legs of the goals package to be tested, the “to blank” and the “to be blank” legs of the package to be tested. We put the postulates into mass in the environment and see what happens. If it ionizes white or colored then it’s erasable. If it ionizes black it’s unerasurable.

08:00

So the difference between an erasable goals package and an unerasurable goals package in terms of ionization is that an erasable goals package, the two positive legs will ionize mass white or colored and the two negative legs will ionize the mass black. Whereas a non erasable goals package all four legs of the goals package ionize the mass black. So there’s the test, very, very simple test.

08:27

Unfortunately it can’t be used much early on in therapy. A person has to come up the line a bit and get very, very familiar with putting postulates into mass before the ionization effect begins to show up in any detail. So it’s not a... it’s a later on test... you... unfortunately it can’t be used much with any sensitivity early on. But never the less it’s a valid test.

08:52

So to finish off this subject of ionization, this brief look at ionization I’ll give you the four tests of a... of a... an unerasurable goals package. It’s very vital to determine whether a goals package... a junior goals package is erasable or un erasable. If you can determine it before you play with it in therapy you can save yourself a lot of... a lot of heart ache, a lot of apathy, a lot of misery and a lot of upset, because playing... trying to erase unerasurable goals packages is murder, is blue murder, I can assure you.

09:27

So it’s very important that we have a whole battery of tests we can back up so we can be absolutely sure from the very outset that a... a goals package... any... any goals package we wish to test we can find out immediately whether it’s erasable or unerasurable.

09:40

So the first test is umm... if it’s unerasurable umm... the “to blank”... the positive “to blank” goal is opposed to the “to be known” leg of the basic package. That is our first test and that’s our most ... that’s still our most important test. That’s the one you should always try first. It... It’s an obvious test so that is the one you do first. That’s the first one.

10:04

Now the second one is the... the positive... the two positive legs of the goals package to be tested ionizes mass black. If the two positive legs of the goals package you're testing... the goals package you're testing ionize mass black then it's an unerasable goals package.

10:30

Now there's a third test which is an awful test but it is a test. It's a final test, well it's not final there's one more actually, there's four altogether, but the third one is an awful one ahh... ahh... the goals package is unerasable if you get a black field, a rising tone arm, much apathy with no relief when you try to erase the goals package. I'll give it to you again, you get a black field, a rising tone arm, much apathy with no relief, get that, that's important, there's no relief, with no relief when you try and erase the goals package in therapy.

11:10

Unl...if you do this, the cure for this state of affairs, the only cure for the apathy and the black field and the rising tone arm, the only cure is to re-null the "to know" goals package at level 5A. That's the only cure is to re-null the "to know" goals package at level 5A and all the... all the unwanted symptoms will... will vanish by magic if you do that. One of the magics of the basic "to know" goals package.

11:33

The Games Goals

Now the fourth one, there's a class of goals which are called games goals, there called games goals. Now a games goal has no meaning outside of games play. That is the definition; it is a technical definition of a games goal. An example of a games goal is "to win" or "to exploit", "to play". Quite clearly the goal "to win" has no meaning outside of the games play. The goal "to exploit" has no meaning outside of games play. The goal "to play" has no meaning out of... outside of games play. You see that? So that's a technical definition, they're games goals.

12:15

Now the datum is that all games goals are unerasable. There unerasable. The reason why there unerasable, because the games goal has no meaning outside of games play, it has no complementary postulates and therefore it won't erase. See it has no meaning outside of games play. A game, you see, consists of con... conflicting postulates and if a goal has no meaning outside of games play then it...it only consists of conflicting postulates. It has no complementary postulate, therefore it will not erase in therapy. It cannot erase in therapy because it has no complementary postulates in the set.

13:03

For example: umm... it's what we call technically a game goal has a one game class postulate set. Let's take the goal "to exploit", I'll show you what I mean by this. We take the goal "to exploit" well the goal "to exploit" the only... the only set.... Uhh... the only class in this set that... that ... that is active in the goals package is "to exploit" versus "to not be exploited".

When you look at the game of exploitation it's always that, that's the only game that's played in the set is "to exploit". Somebody's an exploiter and he's trying "to exploit" somebody else who doesn't want to be exploited." So it's "to exploit" versus "to not be exploited" and that's the only class in the set.

13:53

Nobody's going around saying to both exploit and "to be exploited". Nobody's going around wanting "to be exploited", and being opposed by somebody who doesn't want "to exploit" them.

Nobody's going around not wanting to be exploited and somebody over there who doesn't want to exploit them.

And these are all null classes in the set the only class that has any meaning in the set of a games goal in the goal "to exploit" as the example is the... is the goal "to exploit" versus "to not be exploited".

So it's a one games class postulate set. It's a one games class goals set. There's no... and there's no... and that give a games class and so there's no complementary postulate so the games goals... the games goals will not erase in therapy. They are unerasable.

14:42

The games goals are rather insidious. They're very insidious; it took me a while to puzzle them out. I got a call on games goals while I was researching this material and they won't erase and they showed all the ... all ... all the effects of unerasability. You get the apathy, you get the rising TA, the rising tone arm, you get the black field and so forth but they don't apparently oppose the goal that the two... the "to blank" leg of the goal doesn't apparently oppose the "to be known" leg of the basic package, and they don't obviously obey the ionization rule. Like you can get the goal to... to... to umm... "to play" for example and you can put that goal out, "to play" and "to be played" and uhh... you'll find that they don't obviously ionize black when you put the goals into mas... ionized mass with the goal. So they pass... tend to pass the ionization test.

15:44

But once you spot that they're a games goal you avoid them like the plague. They're certainly unerasable. There's no way in the world you can erase a games goal in therapy.

It's ahh... because it's got no meaning outside of games play. It's simply a goal, which is part of games play.

15:59

And because it's got no meaning outside of games play it's unerasable, because it's got no complimentary postulates in it's set. Follow?

16:05

The games goals, that's the four... that's the four tests of a... of an un... of an unerasable goal. It's opposed... the opposition test, being the first one. Opposed to the "be known" leg of the basic package. The ionization test. All four legs of the unerasable goals package ionizes mass black. The third one is you get a black field with rising TA, apathy with no release when you try and erase the goals package, that's the third one. And the fourth one... unerasable goals package is a games goal.

16:45

And these are the only four. There aren't any others, you've got all of them there now. I know of no others. There ... there's the four.

16:55

By the use of those four criteria you can sort out whether any goal is erasable. I mean, obviously the list is complete because if you were completely uncertain the final thing to do is to simply test the goal. Try and erase it. And ... and... if it starts to kill you it's unerasable. And there's no relief and the tone arm goes up if your using a meter or your field goes black and uhh... you get lots of apathy and umm... the tone arm goes up and so forth and there's no relief. Well it's obvious it's an unerasable goal. And that's the final test. It's a pretty... pretty awful test to have to make but it is a test. So we can test them all. Within that four we can test any... any of them. We...we can always come up with a positive answer one-way or the other. We can find out whether a goal is erasable. Ok so much for... there's a lot more to this subject of ionization but that's it's immediate application to... to level 5. That's it's immediate practical application to level 5 is this subject of... of testing for an erasable or unerasable junior goals package.

18:03

My final words on the subject of junior goals packages is stay with the list that I've given you. You have a list of the most important junior goals packages, there's only a dozen or so of them, and you have them plus the goal "to reason", that's an important one and should be added to the list. Outside of that list that I've given you there's... there's ahh.. there's probably another... another 20 or so, 15 or 20 that can be found, which are erasable but their of minor importance and they will all... all come to light on the list that I've given you.

18:41

So fiddling around looking for obscure erasable junior goals and hoping that that will provide salvation for you is really one way to waste time in therapy. The... the... the... The key goal is the goal “to know” at level 5A, concentrate on that and then concen... when that goes null on you and you can’t get any more change out of that then go on to level 5B and work on the list that I’ve given you and then go on to level 5C, call it a day.

19:10

Don’t spend hours and hours fiddling around chasing up obscure goals... junior goals packages and testing them for eras ability, it’s a complete waste of time. I’ve given you all the important ones, the “to know” goals package and the important junior goals packages, all the rest are quite trivial anyway, so you really don’t have to do any...any...any...any searching at all, cause I’ve given you the data.

19:39

The “To Eat” Goals Package

Now the remainder of this tape I want to take up body... bodily goals packages. They do have some importance in therapy. You will find them on my list of junior goals packages. Well two of them, there’s the goal “to eat” and the goal “to sex”.

The ahh... the human spirit shares these goals with the subject of the body, the body is acting on both those goals packages and ahh... so they do need a little bit of amplification, those ahh... those two goals packages do.

20:12

The easiest of the two to erase is the goal “to eat”. That is really a breeze. Unless the person has a lot of specific psychological difficulties on the subject of eating, and that’s only a minority of the population and these people know who they are, if they have eating problems, I don’t mean things like indigestion, I mean definite psychological problems. You know, the person overeating or compulsively eating or compulsively starving. If their doing either of those things they’ve got a specific eating problem and the goal “to eat” will be a specific cure for the condition, but this is a minority of the population.

20:52

The majority of the population, the goal “to eat” although it’s shared between the human spirit and the... and the body, they both share this goal, and the goal is erasable, ahm... it’s a very easy one to erase.

21:08

Now why is it a very easy... why is the goal “to eat” a very easy goal to erase? Because, and here is... here is the key datum, because games play in the “to eat” goals package is not completely compulsive. It’s not completely compulsive.

21:27

The human body, normally, most of the time, operates on the basis of “must eat” and “mustn’t be eaten” that is it’s most common... common... ahh... ak...ak...common class it sits in. it “must eat” and it “mustn’t be eaten”. So that’s one class in the set but the other class in the set “mustn’t eat” and “must be eaten” the human body can just get into that class. So that class is available to the human body. And so the... it can occupy those classes, also it can occupy the... the ahh... the classes of umm... “to be... “to eat” and “to be eaten” and “to not eat” and “to not be eaten”.

22:16

In other words the human body can just occupy all four classes in the set and so the set is not complete... games play is not completely compulsive. The... the... the key is that the body... the human body can just tolerate being... being eaten. It can only just barely tolerate it, it doesn’t like being eaten, but it can just barely tolerate it and because it can just tolerate it the game... the goals package “to eat” is very readily erasable.

22:48

It doesn’t pose any great difficulties to the average person. It will only pose difficulties to a person who has psychological difficulties on the subject of eating. That person can expect to have a ball umm... erasing the “to eat” goals package.

23:00

So when I say the body... human body can have some slight tolerance to be eaten but doesn’t care for it, I’ll give you an example of that. That is that even a tiny thing like a mosquito bite or a gnat bite, which is a tiny insect and you know very, very tiny insect taking a little tiny bite out of the human body. The body’s response to that is enormous. It simply doesn’t like being... having even little bits bitten... nibbled off of it by other life forms and... but it can survive it, it doesn’t completely go into apathy and die when it... somebody tries to eat it. It does have some slight tolerance to being eaten, but it doesn’t like it one little bit. But never the less it can tolerate being eaten to some slight degree.

23:48

So that’s it’s saving grace on the subject of eating and it allows the “to eat” goals package for the majority of the population to be fairly readily erasable. And it’s not great... no great deal, the “to eat” goals package is. It erases rather readily and ahh... it’s not particularly therapeutic and ahh... it will be highly therapeutic to those people who have

specific eating problems and ... either because their compulsive eaters or compulsive starvers and they will have a ball as I say on the “to eat” goals package.

24:19

Ok so much... I'll give you the main strategy of the eating game all life forms use, this is the main strategy they all use. The whole idea of winning the eating game, how to win the eating game and so forth, the inner secret of the inner secret of the inner secret is to try and convince your opponent that your inedible, that you can't be eaten. If you can convince your opponent that you can't be eaten you've won the eating game and that is the main strategy of life forms is to go around and convince other life forms that they can't... that THEY can't be eaten and they're inedible. If you can do that you've won the eating game. It's a pretty... it's a pretty miserable game but there it is. That ... that... that's the main strategy.

25:02

You find plants doing this, you know, they fill themselves up with rather poisonous chemicals and along comes an animal and takes a nibble of the plant and the animal goes away and gets a tummy ache and the animal recons well I won't eat that one... eat that plant again. And the plant says, “Ha Ha I've now ... I've now convinced... convinced that animal that I'm inedible.” You see? So the animal won't eat him any more. So there it is, he's won his eating game.

25:26

So that the main... that's the main strategy in the eating game, is to convince your opponent that your inedible. And ... and really it's a very, very simple game. It's an almost naive game, the eating game is, because that's it's only strategy.

25:40

The “To Sex” Goals Package

Ok, so much for the “to eat” goals package, now we come to the “to sex” goals package and I wish... I wish... I wish I could say the same thing for the “to sex” goals package, but it's a very, very... ahh... it's a bodily goals package, the spirit... the human spirit shares this goals package with the human body and ahh... the two jog along there.

26:00

You think, “Oh well, the to eat goals package is a bit of a breeze, we just hope that the “to sex” goals package is a bit of a breeze.” Well the average human being when he walks into the “to sex” goals package, he will walk into a brick wall. He will go kathumk, thud, flunk and he will end up flat on his face. So I do need to give you some background data on the to... “to sex” goals package.

26:23

I've had to wrestle this data out the hard way really... really I have. I mean it's ahh... it's been a slugging match getting this data out and finding out there's an awful lot of significance in this subject of sex in... in human beings. Put it this way, if... if there was an ma... a malevolent God who knew all about goals and goals packages and was sitting up on high and looked down on earth and saw all those human beings and he ... he... would... would... with malice aforethought decided to make the subject of sex absolutely uneraseable for human beings psychologically he couldn't have done a better job of it the way it is. He couldn't have done a better job.

27:07

It is virtually uneraseable except with a highly specialized technology such as we have here... here at level 5. Level 5 will get this goals package apart. It will get it apart but I can assure you there's nothing else will get it apart. There's nothing that I know of. Freudian psychotherapy won't get it apart. Scientology won't get it apart. Dianetics won't get apart. Hypnosis won't get it apart. I know of no other psychotherapy or any form of psychological approach that will... will clean up this subject of sex out the human mind and completely relax the human being on the subject of sex except this technology that I have. So that's the position on the subject of sex.

27:52

Games Play in the "to Sex" Goals Package is Totally Compulsive

It... it's a... it's a nightmare which you pick your way through and unless you know what your doing you're gong to fall flat on your face. Now the... the reason that it's a nightmare, the basic fundamental reason that the "to sex" goals package is a nightmare is simply because the human body has adopted gender specialization. Human beings are born either as males or as females. They are not born as both and they are not born as neither therefore as far as the human body is concerned the "to sex" goals package is a compulsive games play. Games play in the "to sex" goals package is totally compulsive as far as the human body is concerned.

28:43

Now it will be useful to give some background material on the subject of sex and to see how it got into existence in the universe cause this will give a person some idea of ahh... of what their up against.

28:59

Very, very fundamental life forms like bacteria, viruses etcetera they don't use sex as a... as a reproductive... as a means of reproduction. They... they... they reproduce asexually and they do this by cell splitting. The... the bacterium when it want to reproduce it simply splits itself into two bacteria and the two go their separate ways and ahh... this is

the same for viruses and the same for very, very... these little creatures you see... paramecium and so forth you see floating around in a pond, which you can see under a microscope if you care to look at a drop of pond water that's full of little single celled creatures, amoeba and so forth, they all... they all reproduce... they all reproduce asexually by cell splitting.

29:47

Now cell splitting is reproduction of ... is cloning... it's cloning. In other words the ahh... the ahh... as far as the biological traits, the genetic traits the ... the offspring is exactly the same... is a clone of it's parent. It's exactly the same as a person... in other words if ahh.. if a bacterium splits in half, the two halves biologically and genetically speaking, in terms of their DNA and so forth are completely identical. There's no difference at all. And evidentially for a long while in the universe this went... this went on, it still goes on but as life forms became more complicated, more complex the... there was a move and urge in life towards a more... more comprehensive way of... of reproduction, something which allowed them to... to... to... ahh...to get more... more data, you might say, in their genetic structure and so the subject of sex came into... into operation.

30:50

And ahh... Essentially the system is very, very simple, you get two ... two members of the species, one will... they both contribute a cell and the cell... each cell they contribute contains ahh... contains half their umm... half their genetic material and as representative of their genetic material and the other person represent the other... the other being contributes a single cell and which represents their genetic material and the two cells combine and grows up and becomes a separate individual and will... and it shares ... it shares the ahh... it shares the genetic material of both of the ... of their parents there.

31:34

You might say the two beings give birth to the... to the ahh... to the other... to the other... creature. And ahh... this works better. It does work as far as survival is concerned, it does allow... because it allows more variation of genetic material, it did allow these primitive creatures to survive better.

31:55

But umm... never the less the old cell splitting of single cell creatures still goes on you can see it in any pond, you can see it under any microscope if you care to get a decent microscope and have a look you'll see it going on. You can sit... sit and watch it happen; I've watched it... sat and watched it happen with pond... in a drop of pond water. You can see these little these single cell creatures splitting.

32:19

Now the... the earliest life forms. The earliest attempts along these lines was that the ahh... well first of all the umm... the two cells that were contributed became a male cell and a female cell. And earlier on there was very little difference between the two cells and uhh... but finally the female cell became larger and more complex and uhh... as the female body became more and more.... Looked after the... the growing cell before... before birth you might say... so that the female cell became larger and the male cell became very rudimentary and became the very rudimentary sperm. And umm... and then the ahh... but in the earliest creatures we find that umm... that the male and female... any creature could be both male and female. Now these are known as the bisexual creatures. There's plenty of them about on the planet still today, you'll find them, their bisexual creatures, they are both male and female.

32:26

Many trees are both male and female and ahh... although they can't ... their male cells can't fertilize their own female cells, they've got some provision in their genetic code which prevents this from happening they... they can be fertilized... their male cells can be fertilized by female cells from the same type of tree providing it's another tree and their... their... their... their male can ... can also fertilize another female cell of the same type of tree.

33:55

So the... the creature gets a... a double advantage she... it gets a double advantage there by being both male and female it can... it can both umm... it can reproduce in two ways you might say.

Earth worms are also bisexual. They call them... also known as hermaphrodites, that's the other word for them, the Greek root hermaphrodites, that uhh... their bisexual hermaphrodites, they're both male and female. In other words two earth worms can meet up and they can both... they can both... their both... each creature is both a male and a female and the male part of an earthworm can... can... umm... can join up sexually with the female half of another earthworm and... and at the same time it's own female half can be umm... can be joined up with the male half of another earth worm. And ahh... so it can both ahh... both of them are quite capable of laying eggs and ahh... and ahh... fertilizing a female sperm... female egg or and having their own female eggs fertilized. So they're both capable of fertilizing and being fertilized. Bisexual, very, very common, bisexual creatures.

35:09

Well as games... as games play became more and more compulsive on the same subject of sex in the universe. And this is the only reason why it came about. Umm... the games play became more and more compulsive and more and more... well just more and more compulsive, became more and more important, the subject did. That eventually the

creatures split off and no longer were bisexual. They began to adopt gender specialization. You'll find these trees, for example, some trees are bisexual and other trees are male trees and other trees are female trees and ... and they've adopted... some trees have adopted gender specialization and certainly most ahh... most higher level creatures have. umm... reptiles and so forth and uhh... mammals and man, all the higher birds, they've all adopted umm... all adopted gender specialization to... to a greater or a lesser degree.

36:08

Some... amongst some birds they... they can become male and female, you know, if they lose a male in their tribe one of the females becomes a male. They've all sorts of peculiar mating habits, some creatures have, but the tendency as evolution progresses is towards more and more gender specialization. And the peak is reached in mankind with his complete gender specialization where he's either a male or a female.

36:35

Now before we go any further we must take a very close look at this subject of masculinity and femininity. These are little junior universes masculinity and femininity, their junior universes.

36:48

Now the... the... the junior universe of masculinity has an anatomy. The junior universe of masculinity only consists of the postulate "to sex" and the postulate "to not sex". And the junior universe of femininity only consists of the postulate "to be sexed" and the postulate "to not be sexed". Now that is about as fundamental as you can get on the subject of masculinity and femininity, they are the basic postulates that govern masculinity, femininity.

37:28

Masculinity consists of the "to sex" and the "to not sex" postulate. Femininity consists of the "to be sexed" and the "to not be sexed" postulate. And that... that completely... those... those junior universes consist entirely of those postulates.

37:46

Remember I said that this universe ... this whole universe in which we live only consists of life and postulates. So it's no surprise to us that masculinity in it's final anatomy only consists of postulates, and they are the postulates. There's nothing else there, basically there's nothing else there. It will take you a long time to get that... get that amount of reduction but I can assure you that I've worked it through and that is the reduction and that is the junior universe of masculinity and that is the junior universe of femininity. They are the postulates that those junior universes consist of.

38:22

And armed with that data you can take the “to sex” goals package apart. Without that data you won’t get it apart, you need that datum to get it apart. That’s the key data, that... that you might say is the inner secret of the inner secret. The anatomy of masculinity ... the postulate anatomy of masculinity and the postulate anatomy of femininity, given that... once you’ve got then it all starts to make sense.

38:48

Before we... before we press on I’d like to mention one of the more curious things about the subject of sex in the English language. That in English the word sex is a noun it is not a verb. This means, in English, we have no verb on the subject of sexual intercourse, for example. We can’t use the verb “to sex,” it’s not strictly the use of the English because sex... the words sex is a noun. It is not a verb. So ahh... so when we use the “to sex” goals package I’m using it slight in... in... in... not in accordance with the English language.

The Anglo Saxons had a verb “to sex” they called it the verb “to fuck” that’s Anglo Saxon, but ahh... evidently the English are far to genteel to have ... have a verb of that nature. That sex is... is a noun, it’s not something that is done, sex isn’t. Sex is something which exists, you see, somehow it comes into existence spontaneously... I’m being funny... I’m being sarcastic. It’s most peculiar.

40:00

It’s a... it’s... some languages in the world have sex... the word sex is a noun and a verb, but certainly we’re using it in therapy ... the verb is a ahh... the word sex is a noun and a verb. I’m using it in that context, as a noun and a verb. So to... “to sex” is a verb, I’m using it as a verb. In other words I’m verbalizing the noun, which is a very, very common thing to do, it’s not an unknown thing to do in the English language and I’m doing it for our purposes. So I’m using it here.

So, language purists, I’m sorry but I’m not going to get into complicated verbs like “to inseminate” or...or “to procreat” none of which mean exactly the same as “to sex”. If you don’t like the word “to sex” then use the word “to fuck” and that... that means exactly the same as “to sex”, it does, it’s the old Anglo Saxon, but It’s a swear word in our language so even that’s not quiet acceptable. So we’re... we’re going to use “to sex”.

41:03

Ok, I’m going to switch this tape over now to the other side.

Here we are back again, side two same date.

Now another curious thing about ahh... our English language on the subject of sex is the word gender. The word gender is not supposed to be used in terms of masculinity and femininity as applied to people. It's only supposed to be used in terms of words of a feminine nature and so forth... in other words it's a... it's a literary term. It's a... it's a grammatical term and the word gender is strictly speaking a... a grammatical term and you... you ...shouldn't... couldn't really say that man is a male gender or female is a female gender. That is not strictly the correct use of the language, but never the less, I'm gong to use it in that sense. To hell with the language purists.

41:54

If I use the word gender I mean it strictly in the... in the physical sense of... of ... of masculinity, male gender, female gender, in terms of human beings and human bodies.

42:04

One is almost lead to the inescapable conclusion that the people that put the English language together were very, very repressed on the subject of sex which is an opinion I would not disagree with.

41:15

Right, well now the time has come for us to take up this subject of how the sex game is actually played between males and females and ahh... to how the... how the postulates actually work in the sex game. It's necessary to know this to...to understand just... just what's going on.

42:33

Usually the game is... is originated by the male in... in... amongst humans. It's not common in all life forms, amongst humans the male, it usually starts with the male, he puts out his ahh... his ahh... "must sex" postulate and it starts... he directs this towards the female of his choice and she upon sensing this postulate will immediately go into a "mustn't be sexed" mode. Now soon as she does this of course sexual sensation will generate at the boundary between the two postulates because their opposition postulates.

43:07

So we have him pursuing her, he's saying "must sex" and ahh... he... she's saying "mustn't be sexed" and she's being pursued. And ahh... that... that goes on and the two things that can happen there. The most common thing is that in the initial stages is that the ahh... the female must be very, very careful not to overdo her "mustn't be sexed" postulate because in the initial stages if she... she pushes that postulate too hard she'll drive the... the male from his "must sex" postulate over to his "mustn't sex" postulate in which case he will lose interest in her.

43:46

The situation will then be that she's in "mustn't be sexed" and he's in "mustn't sex" and of course their complementary postulate and there's no sexual sensation being generated and the game stops. See? So the female has to watch that and if it happens, of course, if it happens umm... if it does happen that she overdoes the "mustn't be sexed" postulate and drives him into "mustn't sex" the she must immediately... and will immediately switch over to her must... "must be sexed" postulate. She'll switch over to her "must be sexed" and give the come hither sign and ahh... this will resurrect his flagging interest now because sexual sensation is again being generated between the females "must be sexed" postulate and his "mustn't sex" postulate so he... the game is sexual interest there, sexual sensation being generated he will see her come hither and start to pursue again.

44:34

As soon as he starts pursuing again he goes into his "must be sex" He goes into his "must sex" postulate, of course as soon as she senses it she will go back into her "mustn't be sexed" postulate again. And so that is the... that is the full cycle that... that... that goes on there. That's courting, that's the courting play between the... between the sexes. The interplay of the male between... using his "must sex" and "mustn't sex" postulate and the female using her "mustn't be sexed" and "must be sexed" postulates.

45:06

The two are used so that sexual sensation... the idea is to optimize the game so that sexual sensation is always being generated between them. The tendency is because of the game, there's always conflict between their postulates is that the distance tends to close, tends to close up, there. So the two tend to get closer and closer together and all going well, the... the... the courting goes... goes well they get closer and closer and closer together until there's actually physical contact occurs, but still the same postulate structure occurs the male goes into "must sex" the female will go into "mustn't be sexed" and ahh... if she overdoes it and he goes into "mustn't sex" then she will go into "must be sexed" and then he will go back from "mustn't sex" into "must sex" again and she will go back into "mustn't be sexed" so the... the... the postulates are always conflicting but you... as long as you bear in mind that the postulates are always conflicting and that the male moves between "must sex" and "mustn't sex" and she moves between must... "must be sexed" and "mustn't be sexed" and then... then you've got it. You understand it. As long as you realize they are both striving for conflict... conflicting postulates.

46:15

So the mystery of the sort of strange courting dance between males and females is understood in terms of postulates. You can trace it out, you can, and you'll see that it is exactly as I say it is.

46:28

When physical contact occurs eventually we get to the point where actual coitus is... is ahh... is embarked upon but still we get the... the ahh... we still get this same pattern of ahh... of postulates. The male... the male's umm... must... "must sex" postulate now becomes a forward pelvic thrust with his penis... with his erected penis becomes the forward pelvic thrust and the female goes into a mustn't... "mustn't be sexed" postulate which is a forward sexual withdrawal. Then the male goes into a backward pelvic withdrawal, that's his withdrawal of must... must... "mustn't sex" ca... that's a backward pelvic withdrawal. The female while he's in that mode will go into her "must be sexed" which is a backward pelvic thrust and ahh... so you see that the... that the ... you still see the same cycle, the postulates are still being... still in opposition to each other but now we're... we're entering into a bodily level. We have the male his "must sex" postulates into a forward pelvic thrust and his "mustn't sex" postulate translates into a backward pelvic withdrawal. The female's "must be sexed" postulate translates into a backward pelvic thrust and her "mustn't be sexed" postulate translates into a forward sexual withdrawal.

48:07

The tendency of course as they get... as the terminals get closer and closer and engage in ... coitus starts is for the game to...more and more sexual sensation to be generated and as the game becomes more and more frantic at which... until the point of orgasm is reached. Now orgasm is a definite point on the cycle and has a definite postulate structure, which is... you should ... the person... you should know about the structure of orgasm.

48:29

Now a male goes into orgasm when he de... deprives the female of her "mustn't be sexed" postulate and drives her into "must be sexed". He uses his "must sex" postulate to deprive her of her "mustn't be sexed" postulate and drive her into "must be sexed". When he considers this has occurred, and it's purely a subjective consideration, when he considers this has occurred he will go into orgasm.

48:55

The female goes into orgasm when by the use of her "must be sexed" postulate she deprives the male of his "mustn't sex" postulate and drives him into "must sex" and when she considers she's done this she will go into... she too will go into orgasm and the partners can actually work it between them when their skilled at the subject so they both achieve orgasm at the same moment. It needs a little bit of practice but...most... most... most couples usually manage to do this, and they can both achieve orgasm at the same moment.

49:28

But there is the postulate structure of... of... the male orgasm it's a question of depriving the female of her "mustn't be sexed" postulate, then he will go into orgasm and the female goes into orgasm when she considers she's deprived the male of his "mustn't sex" postulate and he's driven into must... "must sex", and then she will go into orgasm.

49:47

So there's this mysterious subject of Of orgasm and it's postulate structure.

49:52

Well you say, "So far so good, how is it that we're in a difficult subject? I mean, how come this doesn't come apart routinely? You know, it ought to come apart, we seem to have it all straight." Well there's one or two little flies in the ointment and look... the first of them is, the first peculiarity, and maybe you've spotted it already, is in these umm... these bodily motions on the subject of sex, these pelvic thrusts.

Now umm... the... the human beings ahh... have adopted over the millennia face to face coitus which is a most peculiar position umm... for them to ... to ... to complete the sex act. The ahh... the ... if you go back to their nearest ancestors, the apes, the chimps and so forth, the ... the chimp... male chimp mounts the female from behind and this is very common in all... all... all mammals, the male mounts the female from behind. But in human being.... This used to happen in humans too but ahh... for the last few millennia they've adopted ahh... adopted the front to front coital position as the more common. Well ahh... it still can be practiced umm... the ahh... mounting the female from behind, it can still be practiced and is practiced by humans, but never the less the more common position known as the missionary position, I believe, is the male and the female both facing each other front to front.

51:27

But let's consider the ape for the moment. Let's consider ahh... let's consider ahh... an ape. Now a male ape, all his sex life would be in front of him, peculiarity of a male ape, now he shares this with the male human that all a male human's sex life is in front of him. He.. he... ahh... when he looks out the... the... the sex is occurring in front of him because he's... he's always... ahh... the female is always in front of the male in the sexual position so it's true for an ape and it's true for a human. So the ahh... through a male... human male and a male ape all his sex life is in front of him. But the female ape, she's mounted from behind and it's only fairly recently in human history that ahh... that front to front copulation has occurred amongst human beings. There's far many more many millennia that females were entered from behind genetically on the genetic track.

52:32

So the female, still the human female in common with the female ape her... all here sex life happens behind her. Nothing happens in front of her. If she's entered sexually she's always entered from behind and this is why the... the motions of the female of the "to be sexed" and the "to not be sexed" pelvic thrust are in terms of umm...of a rear. The... the... the female... remember ... what is said in coitus between the male and the female the female "to be sex... "must be sexed" postulate is a backward pelvic thrust, which makes a lot of sense if the male is behind her but makes no sense at all if the male is facing her from the front but never the less the... the...the ahh... it still applies to human females. They still retain their ancestry on this subject and that in terms of ahh... ahh... physical efforts on the body... the human female the... the ... the actual physical effort of "must be sexed" is a backward pelvic thrust and "mustn't be sexed" from a physiological level is a forward physical withdrawal.

53:48

She still has... interprets her sex life all happens behind her, the female does, even though she engages in front to front coitus. Now you... you... you ought to know that, otherwise you don't understand these ahh... these... these... these physical motions of pel...pel... pelvic thrusts and the way they work together.

54:06

Now you remember I said earlier on that the games play is compulsive in the "to sex" goals package in humans. Now what do I mean by that? Well the "to sex" postulate is identical to the "to not be sexed" postulate and the "to be sexed" postulate is identical is identical to the "to not sex" postulate in terms of the set and we see this identification very, very clearly when we get to the physiological ahh... efforts in coitus amongst humans. The, for example, female "must be sexed" is a backward pelvic thrust but in terms of pure musculature that is exactly the same as the male "mustn't sex" which is a backward pelvic withdrawal. There isn't any difference between a... a... a backward pelvic withdrawal and a backward pelvic thrust they are identical in terms of musculature action. So the female's musculature action in her "must be sexed" postulate is identical to the male's musculature action in his "mustn't sex" postulate. They're identical. And similarly the male with his forward pelvic thrust of " must sex" is exactly identical in terms of muscular action to the female's forward pelvic withdrawal. There is no difference between a forward pelvic thrust and a forward pelvic withdrawal. Call it... call... call it one way or the other but they're identical in terms of muscular action.

56:04

So you see what I mean that when I say the human body...the... the games play is... is completely compulsive the postulates at a muscular physiological level are identical in action... in motion and so forth. You follow? So the games play as far as the human body is concerned "to sex" is a compulsive games condition. The identification is complete, there.

56:32

Now what is the identification between... the... in the compulsive games play between the genders? We see the identification between the postulates. Well the identification between the genders is that a male equal a non female and a female equals a non male. They are the identifications. Male equals non female and female equals non male.

56:58

That's just simply another way of expressing the concept that... that "to sex" equals "to not be sexed" and ahh... "to be sexed" equals "to not sex", it's just another way of expressing it, in terms of... when you consider that the... the... the ahh... that the junior universes of masculinity and femininity only consist of postulates, that I mentioned, only consist of postulates, the "to sex" postulates.

57:22

You might be... write it down on a piece of paper you'll see it immediately that... that ahh... is the identification of the genders is that a male masculinity is non femininity and femininity is non masculinity.

57:37

It's... it's cute isn't it.

So when I say there's and identification in the "to sex" goals package, a false identification there, in compulsive games play, I can prove it. I can prove it. At the... at the physiological level the muscular contractions which the human bodies undergo during the sex act, that ... that... that the contractions... there's an identification between the contractions, there. So there's the proof, there's the proof. So this is not just some airy fairy all up in the air that I happened to dream up one bright afternoon while thinking about the subject. No, no there's a definite evidence to back up what I'm saying when I say there's a false identification in the to sex goals package and the subject of humans and that games play is compulsive in that... in that pack... package at a bodily level, regardless of the physical... of the psychological level.

58:26

In other words you can erase this goals package... the "to sex" goals package psychologically but your body will still be in a compulsive games condition on the subject of sex. You can't do anything about that. It's the way the creatures built. It's built in ... you won't do anything about that which is the following next important datum to understand that although you can erase this subject psychologically and understand it completely and understand fully what's going on you will not change your physic... you body one iota on this subject, nor should you even attempt to try. You'll only upset the body... the body. That's the way the body is, that's the way the body's designed, that's

the way the body's built. It's built that way and that's the way it is... that's the way the mockup is and your not going to change... your not going to... all you'll do... you'll only ruin it's health if you try and much about with it. So just leave it alone. Just erase the goals package for you and understand the body, and understand it's ahh... it's peculiarities on the subject of sex and it's peculiarities on the subject of compulsive umm... compulsive games play in that "to sex" goals package.

59:37

Well you still might say. "Well where's the trouble, why won't it all come apart rather easily? If it is just as you say?" Well I wish it were as simple as I just said it, but there's a little more... there's one little fly in the ointment and it's a rather nasty fly and which does really muck the whole thing up and make it very, very difficult to ahh... to take apart. And make the whole subject very, very confusing.

1:00:09

Let's go into it and ahh... we now know enough about this subject of sex to tackle this peculiarity in... in the human body. It's a purely physical peculiarity of the human being. It doesn't apply to all animals, applies to many, but it certainly applies to humans, to the human animal, to the human body.

Now when a... when a person... as I say the human body either comes in male or it comes in female. Now if it's a male body it has... it has ... it has testicles and a system for producing male sperm and it has a penis which is a device for delivering the sperm and it has the ability to erect the penis when it's mature to get the sperm into the female. Now it has all this equipment there and this equipment starts off in early childhood, even in very early childhood has a positive "to sex" ionization. It's there permanently in the body. Now it's not there permanently in all mammals simply because some mammals you might say... I'm not actually sure of this because I not all that good on the subject of animal... of animals, I not a biologist, but some animals... many animals come into sexual season and go out like... like dog's do. Dogs aren't in season all year round they only have a mating season and cats only have a certain mating season. So for the ... for most of the year their simply not interested in sex, dogs and cats. But they have a certain mating season where they become quite frantic on the subject of sex and copulate and have their young and then it's all over and done with and the rest of the year their not interested in it any more.

1:01:51

Well human beings aren't like that. Well during the mating season with animals there... their bodies ionize sexually. They get a sexual ionization on their... on their... on their gender parts but human beings their in sexual season all year round. So their genitals areas are sexually ionized permanently, 365 days a year and 366 days on leap years. All the year round, you see? There's a sexual ionization.

1:02:22

And what is this sexual ionization? Well in the male the penis, testicles that... that area is permanently ionized with a "to sex" postulate, the plus "to sex" postulate. It's faint at birth, it increases in childhood slowly and jumps in puberty and from puberty... from puberty onwards it's quite intense, it's there all the time. Never goes away. Doesn't ... doesn't... doesn't reverse. It's there all the time.

1:02:59

It ahh... it increases as sexual excitement increases. When the male has an erection there's a much more intense positive ion... "to sex" ionization in the genital area than when his penis is inert it can go down almost zero when it's inert but it's always plus, it's never zero, it's always plus.

1:03:17

Similarly with the female, she has ahh... in the area of the vagina... her vagina is chronically ionized "to be sexed". A chronic "to be sexed" ionization. It can become intense when she goes into sexual play or it can fade out to almost nothing when she's ... when she's at rest, but it's never at zero, it's always plus, it never goes minus, it's always plus, there.

1:03:50

So that is something that you have to know about the umm... about the human body is that it has ahh... a permanent ionization.

Right, so far so good. Is that all on the subject of ionization? Well if that was all we wouldn't have any trouble. We could get this goals package apart, it would be a piece of cake if that was the only ionization but unfortunately it isn't.

1:04:20

It's a strange thing that ahh... human bodies... gender in humans doesn't occur if you talk to a physiologist and you look at a prenatal child it only... gender occurs about the second week in... in the prenatal period. Prior to that there... there... there's no sign of any gender. Then about two... about two weeks on gender... the male fetus starts to produce penis and testicles and the female... female body starts to produce a vagina and ahh... female sex cells and so forth and the ahh... the male also produces male sex cells.

1:05:02

You may not... you may not know this but even young children have the male... a young boy will have male sex cells. He hasn't got many but he's still got some male... some sperm uhh... in the testicles, he still has some male sex cells. And even a young girl

has...has a... has a collection of ... of umm... of female sex cells in the ovaries but there not in any position to be fertilized or to move into the womb or what have you. Neither is the boy any position to ejaculate his sperm. This has to wait until puberty occurs but you should know that the sex cells are present even at birth in humans.

1:05:45

Well there... there not there in anyway near the quantities that they will be later on in life.

1:05:49

Ok well so far so good. But what is this fly in the ointment? Well that's the way it goes prenatally but unfortunately we get this child it's conceived and it starts off as two cells and the two cells split become four cells and after two weeks there's thousands and thousands of cells and then they suddenly go into gender, but , and this is the sleeper in the pack, this is the one you have to know, this is the one that causes all the trouble. There is a residual ionization of the other gender in any gender.

1:06:24

In other words a male not only has quite a strong ionization of "must sex" in the are of his penis and testicles but he has a very faint feminine ionization in the area of the vagina which he doesn't have. It's ridiculous isn't it. In other words the... although the body tries its hardest to separate the males and the females completely it doesn't quiet succeed and there is always some residual ionization of the other gender in all bodies. Similarly with the female, she will have a strong "must be sexed" ionization in her vagina but she has a very faint "must sex" ionization in her vesti... vestigial penis which is her clitoris. So she too has the residual male sexuality there.

1:07:32

It's more cop... obvious in the female because she does actually have a vestigial penis, a clitoris. The male has no vestigial vagina but he still has the residual female ionization in that area of the body around the area of the buttocks. And this is very... always very puzzling to all males. They don't understand it and it...it...it's ahh... it's very, very puzzling to them. But it shows up in therapy and you best understand it. It's a very, very natural phenomenon. It varies from male to male and female to female. I mean some males have... all males have a strong "to sex" ionization in... in the area of their genitals, penis...umm... gen....and umm... testicles but some have a very, very a very weak ahh... a very weak "must be sexed" ionization in the area of their buttock, others have quite a strong one, quite strong residual there.

1:08:38

Similarly with the female. Some females have a very, very faint "must sex" ionization in the clitoris and other females have quite a strong one. And this is the basis of the... of

ahh... homosexuality in males and lesbianism in females. If the ionization becomes too strong, this residual ionization becomes too strong the person can... can actually sexually become the opposite sex.

1:09:14

In other words a male with a very powerful sexual... "to be sexed" ionization in the area of the vagina he doesn't have, and all around the area of his buttocks can easily adopt a female role in sex with another male and ahh... not do any male sexing at all, and purely occupy a female role and become a homosexual.

1:09:38

Similarly a female with a very high positive ionization, male ionization in her clitoris can start pursuing other females sexually and ahh... become a lesbian. And it explains lesbianism in females and explains homosexuality in males.

1:09:56

Now this is a quite un-natural phenomena. It's not psychological, it's not a psychological phenomena it's purely a physiological phenomena and it's not anything that can be changed by therapy. You... you just buy this when you buy the mockup. It's part of the way the body is built.

1:10:16

And I've researched all around this area very, very thoroughly and I can assure you that it's not changeable. You follow that? That ionization there, your body ionization is... is fixed, pretty well fixed from birth onwards. There's nothing much you can do about it except drive yourself crazy.

1:10:34

Many men realizing that their... the back part of their bodies got a slight feminine ionization, it worries them half to death they think their homosexual and they...they... they go on a great rampage to try and prove their sexuality. They start beating up females, they become an absolute bloody menace and all their doing, their making them selves and everybody around them miserable cause they can't change it. It isn't going to change and they might as well accept the fact that it's a part of their physiological nature, and similarly with a female.

1:11:05

So ahh... when you come across homosexuals and lesbians and so forth realize that it's a physiological function your dealing with here and although it can be helped by therapy

your not going with therapy, your not going to change that physiological ionization of their body.

1:11:25

But you can erase the “to sex” goals package and you have to erase the “to sex” goals package to get them to understand what is going on. Nobodies going to understand what is going on until they’ve erased the “to sex” goals package in therapy. When they’ve got it erased they will understand exactly what is going on and before they’ve got it erased they’ll have difficulty with it, so the... the... the... the trick is to erase the “to sex” goals package in therapy. It will erase and knowing this background data I’ve given you on this tape it will help the erasure.

1:11:58

Now the final thing you should know on this subject of ionization is that because of the body’s split between ahh... males and females is that the male usually occupies the front of his body there and he regards this... the penis and genitals and so forth, testicles the “must sex” area of ionization he regards it in the class of self. The ahh... the bit behind him, the area of the vagina he doesn’t have, buttocks and so forth which is ionized “must be sexed” more or less... with greater or lesser ionization than that he regards in the class of not self. He can’t have them both in the class of self because the “to sex” goals package is in the state of compulsive games play because masculinity equal non-femininity and femininity equals non-masculinity so they can’t both be in the same... they can’t both be in the class of self.

1:12:58

If he... so the male tends to retreat to the front of his body and regards it ... this little bit of feminine ionization behind... at the back of him as in the class of not self. The female tends to retreat to the back of her body and ahh... she regards her powerful “must be sexed” ionization in the class of self and she tends to regards this... this very faint “must sex” ionization in the clitoris as in the class of not self. She puts that...puts that over that way.

1:13:29

All genders do this, all males and females do this, they... they... they can’t have both these ionizations both in the class of self. If one of them’s in the class of self then the other one’s in the class of not self, and so on, at a physiological level.

1:13:44

Psychologically of course you can erase the whole package. You can occupy the must sex and must... “must sex” and “must be sexed” postulates simultaneously, you see that. But phsi... the body can’t, the body can’t do it. So if your going to go into the body and

occupy the body universe then, of course, and your going to oc... and your going to be a male then ...then you'd be... your residual female ionization is going to be in the class of not self.

1:14:12

And if you're a female and your going to enter into the female universe of the body then the residual male organi... male ionization in your clitoris is... is... it's going to be ahh... in the class of not self and this is inevitable simply because the body has adopted gender specialization and THAT is the trouble.

1:14:34

Now if you can follow everything that I've given you, here I've given you all the data now on this physiologically, sufficient to get it apart. And uhh... I've given you the hot gen, given you the works, there. There's enough, you see, there's enough bugs in this to.; to make it almost impossible to get apart. I mean, poor old Sigmund Freud, he spent his whole life trying to get it apart and he didn't even discover the "to sex" postulates. He didn't even know the goals package so, of course, he got absolutely no where but it was valiant try, I mean, one must give him full marks for trying but he never even discovered the goals package. But even his was... was ahh... a valiant... even he advances on what was known before, I mean he did well, but he never got t first base.

1:15:26

And ahh... but now we've got it, got the whole gruesome giddy story out on the subject of sex, there. We have the goals package, we have the compulsive games play in the body and we have the spirit... human spirit can play this game too. It's ahh... the human spirit can erase it, we have the body ionizations and we have the game and the... and so forth and the residual ionizations if you... and how they affect the game. If you can put all that lot together and see it then you... it will help you a lot when you come to erase the "to sex" goals package in therapy.

1:16:02

Another couple of points I'll go into rather briefly. The subject of gender symbols, gender symbols. You'll find that ahh.. you'll have difficulty erasing gender symbols. Gender symbols are symbols that represent gender. They're usually clothes, in other words like say ahh... male clothes, male wears certain types of clothes and they'll become male gender symbols. Females wear certain types of clothes, skirts and so forth, is a... is a female... skirt is a female gender symbol. Trousers are a male gender symbol and so on.

1:16:40

And these gender symbols you will have a lot of trouble erasing them at level 5C until you've erased the "to sex" goals package at level 5B so don't muck about with them you

won't get them erased at 5C until you've erased the "to sex" goals package. Once you've erased the "to sex" goals package at level 5B all the gender symbols will erase routinely.

1:17:03

This simply because the gender symbols they've got an ionization. Every gender symbol's got an ionization of one or more of the postulates of the "to sex" goals package and while that goals package is alive and unerased you'll never erase the gender symbol. Never, never in a month of Sundays will you erase it. The trick is to erase the "to sex" goals package, when you've got that erased all the gender symbols will erase like lambs. You can erase them at 5C level, they'll all stand up and nod and be erased and... and... and wish you goodbye on their way. They'll all go out the mind very, very easily and very, very quickly. So, so much for gender symbols. That's the only thing you need to know about them. Don't burn the midnight oil trying to ... muck about erasing gender symbols at level 5C until you've erased the "to sex" goals package at level 5B.

1:17:50

Next thing is briefly the subject of sexual modesty. I've got just a little brief not on the subject of sexual modesty. Because the ionization is chronic of umm... in the human body and it's always positive the... it's rather offensive to ...to the... to the... to the spiritual being so he always tends to cover up the ... the area of the genitals in order to get the postulate out of the positive into the negative. In other words he's... a males got to positively ionize to "must sex" his penis is positively ionized ahh... "must sex." Well he gets fed up with this, so what he'll do he'll cover it up and the thing he covers it up he ionizes with "mustn't sex". You see? Now he's retained his freedom of choice.

1:18:39

Similarly with the female, she will cover up her... cover up her area of the vagina and her buttocks there, which are ionized "must be sexed", she'll cover this up with... with...with a skirt and so forth. Then she can ionize the skirt "mustn't be sexed" and it gives her... and she regains her freedom of choice. It helps her in... helps her in sexual games play. When she hasn't got any clothes on it's very, very difficult for her to change the ionization because the body's got a fixed ionization. So you'll find that the humans prefer to have clothes on in sexual games play because it allows them to ahh... to play the sex games more easily because of the fixed ionization of their body gender parts. Follow that? So this is the basis of sexual modesty. There's no... no great mystery about it, it's a very, very natural thing, very natural.

1:19:25

Now, everything I've said on this tape, ohh... I'll put it another way, there's nothing I've said on this tape which changes in any way the way you run the "to sex" goals package in therapy. You run the "to sex" goals package exactly as I've stated so far and there's no change at all. You run it exactly the way I've said it in the write-up. None of this data

changes it in the slightest. This is... all this is, is background data which you'll find of inestimable value once you start playing with the "to sex" goals package at level 5B. You'll find... you'll suddenly be working with the package and then something will happen and you'll think, "Oh Christ yes, Dennis mentioned that on the tape, now I understand, now I can see what's going on here." And if you haven't got this little bit of data you'd be floundering around and wonder what the hells going on. And uhh... but as ... when you've got the data it will come apart easily. You'll have a much easier trip erasing that "to sex" goals package than I had I can assure you. Cause I had to... I had all this phenomena show up and I had to figure out what the hell was going on too.

You don't have to do this. I've done it for you so you should have a rather easy trip on this "to sex" goals package cause all the... I've taken all the bugs out for you.

1:20:40

So well that... that's about it Greg. This, no doubt is the... apart from the "to know" goals package. The fundamental "to know"... goals package "to know," which, of course, is the toughest one of all to erase. The "to sex" ahh... will run it a close second but... but only because of the gender specialization of the human body and the... and the peculiar ionization... sexual ionization of the human body's and that's the only reason why it's a toughie.

1:21:10

Once you... once you understand these ionizations it... it...it... you... you've extracted the teeth out of the "to sex" goals package in therapy, you have and it will surely erase rather easily. But never the less, it is the second most difficult one to erase. It is a toughie and I can assure you there's no other way to take the subject of sex apart in humans than to erase that goals package. There isn't any other way to do it. It's just simply cannot be done. You've got to get that package erased. When you've got the package erased you've done it. And until you've got the package erased you haven't done it. And the package is erasable. I can assure you it is erasable because I've done it.

But you... once you... even when you've got the package erased your body will still contain it...its ahh... it's sexual peculiarities and it's sexual ionizations and so forth. It won't change those in the slightest. You'll just have to learn to live with them but at least you'll understand them and they won't bother you any more. Ok?

1:22:08

Well we'll leave it at that. We're coming up to the end of the tape so umm... I'll post this off to you when... when I know your back from your holiday. So bye bye for now.

End of tape
